Diploma of Engineering Course Outline

1 Course Description

The UOW College Australia (UOWCA) Diploma of Engineering provides students with access to the university experience within a supported context. In the introductory phase of this course, students will complete subjects specifically designed to develop effective approaches to learning in the higher education context, with a particular focus on developing foundational mathematical skills essential to engineering. The second phase provides a program of study involving students in first-year core engineering subjects, but with additional levels of support which enhance their opportunity to succeed. The Diploma of Engineering provides students with a pathway for entry into the second year of the Bachelor of Engineering (Honours) degree at the University of Wollongong (UOW), with specified credit of up to 42 credit points for subjects in the compulsory core components of this degree.

Diploma qualifications are located at level 5 of the Australian Qualifications Framework. The purpose of the Diploma qualification type is to qualify individuals who apply integrated technical and theoretical concepts in a broad range of contexts to undertake advanced skilled or paraprofessional work and as a pathway for further learning.

2 Graduate Qualities

The Diploma of Engineering course is designed to assist students in developing the UOW College Graduate Qualities. It helps students become:

1. **Informed:** Have a basic knowledge of an area of study and understand its issues. Know how to apply this knowledge.
2. **Independent Learners:** Begin to engage with new ideas and ways of thinking and critically analyse issues. Seek to extend knowledge through ongoing enquiry and active learning. Find and evaluate information, using a variety of sources and technologies. Acknowledge the work and ideas of others.
3. **Problem Solvers:** Demonstrate introductory levels of creative, logical and critical thinking skills to respond effectively to problems. Be flexible and thorough.
4. **Effective Communicators:** Articulate and convey ideas effectively using a range of media. Work collaboratively and engage with people in different settings.
5. **Responsible:** Understand how decisions can affect others and make ethically informed choices. Appreciate and respect diversity and act with integrity. Take responsibility for one's own learning and completion of assessment tasks.

3 Course Learning Outcomes

Graduates will be able to:

1. Demonstrate language and literacy skills in order to read, write, present and listen effectively at a tertiary level.
2. Demonstrate the ability to locate, evaluate and use information appropriately at a tertiary level.
3. Demonstrate the ability to utilise computer technology in order to function effectively in a university environment.
4. Demonstrate numeracy skills in order to interpret, understand and analyse information at a tertiary level.
5. Apply a range of skills that demonstrate independent learning.
6. Demonstrate fundamental knowledge relevant to the field of engineering.
7. Demonstrate an understanding of ethical behaviour in the engineering environment.
8. Develop simple solutions to a broad range of engineering problems, both theoretical and practical.
9. Operate effectively as a member of a team in a study environment or a simulated workplace environment.

4 Course Learning Outcomes Mapped to Graduate Qualities

The table below shows how the graduate qualities are integrated into the course learning outcomes:

Course Learning Outcomes/Graduate Qualities	1. Informed	2. Independent Learners	3. Problem Solvers	4. Effective Communicators	5. Responsible
1. Demonstrate language and literacy skills in order to read, write, present and listen effectively at a tertiary level.		✓		✓	✓
2. Demonstrate the ability to locate, evaluate and use information appropriately at a tertiary level.		✓		✓	✓
3. Demonstrate the ability to utilise computer technology in order to function effectively in a university environment.		✓		✓	✓
4. Demonstrate a coherent core understanding of basic mathematical principles and techniques.	✓		✓		
5. Apply a range of skills that demonstrate independent learning.		✓			✓
6. Demonstrate fundamental knowledge relevant to the field of engineering.	✓				
7. Demonstrate an understanding of ethical behaviour in the engineering environment.	✓				✓
8. Develop simple solutions to a broad range of engineering problems, both theoretical and practical.	✓		✓		
9. Operate effectively as a member of a team in a study environment or a simulated workplace environment.				✓	✓

5 Course Structure and Subjects

3188: DIPLOMA OF ENGINEERING			
SESSION 1			
<i>This session runs on UOW College session dates.</i>			
Subject Code	Subject Name	Credit Points	Hours a Week
PREP030	Launch	2	2*
PREP031	Language for Learning	6	4
PREP032	Scientific Thinking	6	4
PREP036 [^]	Mathematics for Engineering 1	8	8
Total Session 1		22	18*
SESSION 2#			
<i>This session runs on UOW session dates and is offered in Autumn session only.</i>			
Subject Code	Subject Name (UOW Equivalent Subject Code)	Credit Points	Hours a Week
DPEN102	Fundamentals of Engineering Mechanics (ENGG102)	6	6
DPEN105	Engineering Design for Sustainability (ENGG105)	6	6
DPEN103	Materials in Design (ENGG103)	6	6
PREP037 ^{^**}	Mathematics for Engineering 2	8	8
Session Total		26	26
SESSION 3#			
<i>This session runs on UOW session dates and is offered in Spring session only.</i>			
Subject Code	Subject Name (UOW Equivalent Subject Code)	Credit Points	Hours a Week
DPEN100	Engineering Computing and Analysis (ENGG100)	6	6
DPEN104	Electrical Systems (ENGG104)	6	6
DPEN141 ^{**}	Foundations of Engineering Mathematics (MATH141)	6	6
DPEN143	Physics for Engineers (PHYS143)	6	6
Session Total		24	24

* Weekly contact hours calculated for Launch are based on a sessional average.

[^]PREP036 Mathematics for Engineering 1 is a pre-requisite for PREP037 Mathematics for Engineering 2. Students are required to achieve a minimum result of 50% in PREP036 to enrol in PREP037.

#Session 2 and Session 3 subjects are not required to be studied in this sequence and can be taken in any order as determined by delivery availability and any pre-requisite rules in place.

**PREP037 Mathematics for Engineering 2 is a pre-requisite for DPEN141 Foundations of Engineering Mathematics. Students are required to achieve a minimum result of 50% in PREP037 to enrol in DPEN141. PREP037 is offered in UOW College Autumn, Spring and Summer sessions. DPEN141 is offered in UOW Autumn and Spring sessions.

Bridging Subject

Applicants who do not meet the Mathematics course entry requirements as indicated via the link in Section 8 may be eligible to attempt a bridging subject, PREP035 Algebra for Engineering, to meet this requirement. Students who achieve a final subject mark of 50% in PREP035 will satisfy

the Mathematics entry requirements to this course. Students must achieve a minimum result of 50% in PREP035 to be eligible to enrol in PREP036 Mathematics for Engineering 1.

Optional Elective

DPEN001 Principles of Physics for Engineers is available to Diploma of Engineering students and is recommended for students who have not previously studied Physics, however, it is not a required subject. Students who elect to study this additional subject are not required to pass this subject in order to progress to the next session of the Diploma course or to their degree offer, and this subject carries no credit transfer into UOW degree courses.

6 Subjects Mapped to Course Learning Outcomes

Subject/Course Learning Outcomes	1. Demonstrate language and literacy skills in order to read, write, present and listen effectively at a tertiary level.	2. Demonstrate the ability to locate, evaluate and use information appropriately at a tertiary level.	3. Demonstrate the ability to utilise computer technology in order to function effectively in a university environment.	4. Demonstrate numeracy skills in order to interpret, understand and analyse information at a tertiary level.	5. Apply a range of skills that demonstrate independent learning.	6. Demonstrate fundamental knowledge relevant to the field of engineering.	7. Demonstrate an understanding of ethical behaviour in the engineering environment.	8. Develop simple solutions to a broad range of engineering problems, both theoretical and practical.	9. Operate effectively as a member of a team in a study environment or a simulated workplace environment.
DPEN100 Engineering Computing and Analysis						✓		✓	
DPEN102 Fundamentals of Engineering Mechanics						✓		✓

7 Progression Guidelines

Course Progression Requirements

1. Students who have not met the Mathematics entry requirements to this course, and who complete bridging subject PREP035 Algebra for Engineering, must achieve a minimum final subject mark of 50% in PREP035 to enrol in PREP036 Mathematics for Engineering 1.
2. To qualify for the award of the Diploma of Engineering students must achieve a minimum result of 50% for each subject in the Diploma, or in the case of PREP030 Launch, a grade of Satisfactory. This does not apply to optional electives where no minimum result is required.
3. Progression from Session 1 to subjects listed in Sessions 2 and 3 is conditional upon satisfying the following minimum final results in Session 1:
 - i. A Pass grade (minimum final result of 50%) or Satisfactory grade (in the case of PREP030 Launch) result in a minimum of three of the four Session 1 subjects, including PREP031 Language for Learning and PREP036 Mathematics for Engineering; AND,
 - ii. A minimum average mark of 50% in PREP031, PREP032 and PREP036 (a minimum average result will be calculated based upon final subject results achieved in these subjects).

Note: Whilst progression from Session 1 to Session 2 may be permitted if a student satisfies the conditions outlined above, any subject for which a Pass or Satisfactory grade is not achieved will have to be repeated until a final subject mark of 50% (or grade of Satisfactory in the case of PREP030 Launch) is achieved to qualify for the award of the Diploma.

4. PREP036 Mathematics for Engineers 1 is a pre-requisite for PREP037 Mathematics for Engineers 2. Students are required to achieve a minimum result of 50% in PREP036 to enrol in PREP037.
5. PREP037 Mathematics for Engineers 2 is a pre-requisite for DPEN141 Foundations of Engineering Mathematics. Students are required to achieve a minimum result of 50% in PREP037 to enrol in DPEN141.
6. Students who meet the requirements for the award of the Diploma can progress to the second year of the Bachelor of Engineering (Honours) in the Faculty of Engineering and Information Sciences with 42 points of UOW credit transfer.
7. No UOW credit transfer is available for the following subjects: DPEN001 Principles of Physics for Engineers; PREP030 Launch; PREP031 Language for Learning; PREP032 Scientific Thinking; PREP036 Mathematics for Engineering 1, and; PREP037 Mathematics for Engineering 2.

8. Students may exit the Diploma course early and enter the Bachelor of Engineering (Honours) with 36 points of UOW credit transfer ('Early Exit – Incomplete Award'), if they have achieved the following conditions:
 - a) Students must have achieved a minimum final mark of 50% in at least 6 credit-bearing subjects (all subject except those listed at 7, above) in the Diploma; and,
 - b) Students must be on Active Status to exit the Diploma. Students who are not on Active status must successfully complete the Diploma in full to progress to UOW.

Note: Where a student has opted for Early Exit – Incomplete Award, they will not be eligible for the Diploma award until they successfully complete the outstanding equivalent subjects in their UOW degree. Once a student has completed the equivalent subjects at UOW, the student can submit an [application for credit transfer](#) directly to UOW College for the Diploma qualification to be awarded.

8 Entry Requirements / Admissions Guidelines

Entry requirements for this course can be viewed online at:

<https://coursefinder.uow.edu.au/information/index.html?course=diploma-engineering-domestic-uow-college>

9 Assessment

Students are required to complete a number and variety of assessment tasks related to their streams of study.

Each subject has a subject outline that is issued to students. Subject outlines contain an overview of subject objectives, an assessment schedule, a list of learning resources and a weekly topic outline. Subject outlines also contain an explanation of assessment components.

All assessment tasks with a weighting of 10% or greater have marking criteria and an answer/marking guide.

All aspects of assessment are governed by the Assessment Guidelines, which can be viewed at: [Assessment & Examination Guidelines for Students](#) and [Assessment Guidelines](#).

10 Quality Assurance

The College applies formal quality assurance processes to its design of courses, subjects and their assessments. These processes include:

- Clear subject outlines that align with the objectives of the course and support consistent delivery of content;
- Mandatory inclusion of clear and appropriate marking criteria in assessment tasks;
- Moderation of marking of student assessment tasks, ensuring that the assessment criteria have been applied consistently and there is equity across individual markers;
- A regular schedule of audits on student assessment tasks using randomly-selected samples of student work; and,
- The use of feedback from students and teachers to inform continuous improvement of curriculum, delivery, policies and procedures.

Details of the College's approach to quality assurance can be viewed at the following link: <https://www.uowcollege.edu.au/about/policies-procedures/index.html>.

11 Subject Descriptions

DPEN100 Engineering Computing and Analysis

This subject teaches algorithm design and computer programming using MATLAB. Students will develop a systematic approach to analyse engineering problems and create algorithms that solve real-world problems. Topics will include: problem-solving techniques; algorithm design; data types and operators; conditional and repetitive control flow; file access; functions; data visualisation; code optimisation; arrays/matrices; and vectorisation. Students will also focus on computational tools to solve engineering problems such as kinematics of rectilinear and curvilinear motion.

DPEN102 Fundamentals of Engineering Mechanics

In this subject, students explore fundamental laws of motion and their application to the analysis and design of simple structures. Students will undertake a series of design and build projects to see the effects of concepts of mechanics in real structures. Working in design teams, students will also explore the professional responsibilities of engineers in terms of accountability, liability and sound design and analysis techniques

DPEN103 Materials in Design

In this subject, students explore the interrelationships between materials structure, properties, processing, application and lifecycle. Students will apply materials science and lifecycle analysis to develop solutions to engineering problem that are optimised for sustainability. Students must consider both economic and environmental impact in the identification and selection of appropriate materials in engineering design

DPEN104 Electrical Systems

This subject provides an introduction to real-world electrical systems. The subject teaches fundamental electrical concepts: charge, current, voltage, resistance, capacitance, inductance, energy and power. The subject introduces theorems to simplify AC and DC circuits through analysis and simulation. The subject also links the fundamental concepts to practical engineering applications such as motors and generators. The laboratory component covers measurements using electrical components and equipment, designing basic circuits, as well as report writing.

DPEN105 Engineering Design for Sustainability

In this subject, students draw together engineering principles covered in other subjects to develop context-appropriate solutions to engineering challenges. Students will work in teams undertaking investigation, concept development, and detailed design that demonstrate innovative and creative thinking. Students must consider the technical, social, economic and environmental aspects of a design problem to produce solutions that are likely to be workable in the real world.

DPEN141 Foundations of Engineering Mathematics

This subject consists of two strands, Calculus and Linear Algebra. The Calculus strand covers differential calculus and provides an introduction to integral calculus. The Linear Algebra strand covers matrices, determinants and applications of these in the sub-topic of vector geometry. All of these are presented with accompanying examples from various engineering disciplines.

DPEN143 Physics for Engineers

This subject covers vectors and their applications, and an introduction to the physical laws of electricity and magnetism, leading to an explanation of the generation of electromagnetic waves and some basic ideas in communication theory. It addresses electric charge and Coulomb's law, electric fields, potential differences, capacitance, dielectrics and relative permittivity, electric current, resistance, Ohm's 'law', superconductivity, DC circuits and Kirchhoffs laws, magnetic fields and forces, electromagnetic waves and the EM spectrum, carrier waves, modulation and bandwidth. It covers waves; reflection and refraction; interference; diffraction; polarization; optical instruments; quantum physics; waves and particles; atomic physics; and the Bohr atom.

PREP030 Launch

This subject explores the common expectations and experiences of university study in order to assist students to transition effectively to a higher education learning environment. Students will be introduced to the technological platforms and skills required to effectively complete their studies, the importance of academic integrity, available support services and resources, and strategies to develop capabilities of independent learning. Students will be engaged in presentations and activities related to these aspects of academic life to cultivate the development of their student identity in the context of a learning community.

PREP031 Language for Learning

This subject provides students with opportunities to develop their knowledge of, and competence and confidence in the use of text-based language in preparation for future studies. Students will be introduced to a variety of text types and genres commonly used in tertiary study, with a focus on engaging with, and critically analysing, sources of information in terms of purpose for writing, the style employed and writing techniques evident in the text. The focus is on developing language skills and improving students' capability to both evaluate the content of a variety of texts, and to employ that knowledge in their own written and spoken tasks.

PREP032 Scientific Thinking

This subject provides students with a functional understanding of the basic tenets of science, the underlying cognitive skills that allow us to solve complex problems, and strategies to investigate and interpret the world around us. Students will be challenged with problem-solving activities relevant to the sciences to develop a range of key cognitive capacities, including critical, logical and creative thinking, and an understanding of concepts such as objectivity, variables, theory, and Occam's razor. The focus is on developing skills required to design, conduct, analyse and present the findings of primary research related to a United Nations Sustainable Development Goal (UN SDG). Students will also develop their global citizenship through evaluating the significance of their selected SDG, and its relevance to their future study and career pathways.

PREP036 Mathematics for Engineers 1

The focus of this subject is on developing mathematical skills and improving competence and confidence in the language and techniques of mathematics for Engineering and relevant disciplines. The general topics covered in this subject are: algebra, coordinate geometry, functions and trigonometry. Where appropriate, engineering problems will be used to demonstrate the relevance of these skills.

PREP037 Mathematics for Engineers 2

A major component of this subject is the introduction and development of techniques of calculus. The topics covered in this subject are: sequences and series, calculus and applications of calculus. The subject develops analytical problem-solving skills and provides opportunities for students to apply mathematical methods through problem solving.

Bridging Subject

PREP035 Algebra for Engineering

This subject provides students with the core knowledge and skills in arithmetic and algebra which will prepare them to undertake an introductory course in Calculus. The general topic areas covered in this subject are arithmetic, algebra. The focus is on

developing mathematics skills and improving competencies and confidence in the language and techniques of mathematics.

Optional Elective

DPEN001 Principles of Physics for Engineers

Principles of Physics for Engineers is designed to provide an understanding of some of the physical laws governing the operation of the universe. This subject will prepare students for the study of science and engineering at University. It will also help the student evaluate whether they are able to continue to study physics at university as they are required to do for several science and all engineering subjects.
